

roman hnatiuk

- celebrated birthday **28** times
- looking for a better life in **lviv / kyiv**, ukraine
- sometimes answer calls to **+38 (099) 974 61 62**
- check my mail once a day in hnatiukr@pm.me
- update a profile once a year on [linkedin.com/in/hnatiukr](https://www.linkedin.com/in/hnatiukr)
- would like to speak english fluently but for now - only **b1**
- for mom - i write sites, for the rest - a **front-end developer**

React	TypeScript	styled-components	Next.js	Node.js	NestJS
Docker/docker-compose	Express.js/Fastify	Redux	Jest	React Native	

experience in IT (2 years)

- **openvpn, inc** (aug 2021 - present)
front-end developer

working on a cloud service of an open vpn protocol - openvpn.net. my main contribution was in the **architectural and technical re-building** of the portal for the protection and security of private networks based on **react and redux (+ sagas)**. • implemented the authorization interface, using the backend api, cookies, and a "frictionless" ux pattern

- **ustudio, the company** (nov 2020 - jul 2021)
full-stack developer

worked on a technical renewal and performance optimization of the prozorro.sale public portal using **next.js**, developed a multi-level search system with an **api module on nestjs** • developed the mini **library of ui components** neb.ui, built on **react** with **typescript** support

- **freelance** (nov 2019 - oct 2020)
software engineer

developed an authorization for the crm system on **angular**. • coded two **bots** in python based on **telegram api** • sometimes wrote own **pet-projects** using **react** and studied libraries such as **redux**, non-relational databases **mongo db** and firebase, **graphql**. • wrote two **mobile apps** on **react native**: a calorie and weight monitoring system, and an app for organizing shopping list

experience not in IT

- **ukrainian policy, found** (aug 2017 - sept 2019)
media analyst, sociologist
- **urkinvest, the company** (jan 2015 - jul 2017)
assistant press officer
- **x-sport, tv channel** (jul 2014 - dec 2014)
technical consultant of the development department

live to work, work to live

of all the activities i do all the time, like walking the dog, visiting the cinema, playing football, traveling, cycling, the most beloved is not present. know what's that?

writing code. yeah, just like that!

there's nothing cooler than the feeling of the program you just wrote being launched for the first time... and it works! it fills the terminal smoothly with lines of executing code. not too fast, not too slow. not too much, not too little. not so long, but not instantly. with a slightly broken rhythm, a particle of randomness – like the vibrations of an atom. the process goes on, the work is done

and so it ended. announced the answer. a moment ago, it was a simple set of code. and now, right here, you've created something that works better than you. and a simple set of instructions has become a tool

and you did it personally. because you needed to organize something. understand something. something to streamline. and you have this power, in your hands, in your fingers. and this is more than a person can. and more than a computer can

so yeah, give me a terminal and a compiler. and i may not be turning the world upside down, but will surely be lost for at least a day. and the rest – it's irrelevant
